RELAY / UI REFERENCE

The application, screen by screen.

Actual Docker application captures. Nine named views, one view per page.

These are implementation screenshots, not concept mockups. Source PNGs are in docs/ui/.

The customer and staff screens were captured in Reviewer mode; live ADK evidence is separate.

Relay Customer resolution, connected. How it works →

ACCOUNT. CONNECTION. RESOLUTION.

A better way to sort out *your service.*

One conversation for your plan, your bill, or a connection that needs attention. With the context kept along the way.

What happens behind the conversation

1 **We understand the request** ROUTE
A router identifies the right specialist and asks when something is missing.

2 **The specialist checks your records** VERIFY
Account, billing and service tools stay bound to your authenticated account.

3 **You decide what happens next** RESOLVE
Approve a support case, inspect the evidence, or bring in a person.

Verified account access Explicit action approval

Relay / Enterprise customer experience

Synthetic assessment environment • Built with Google ADK

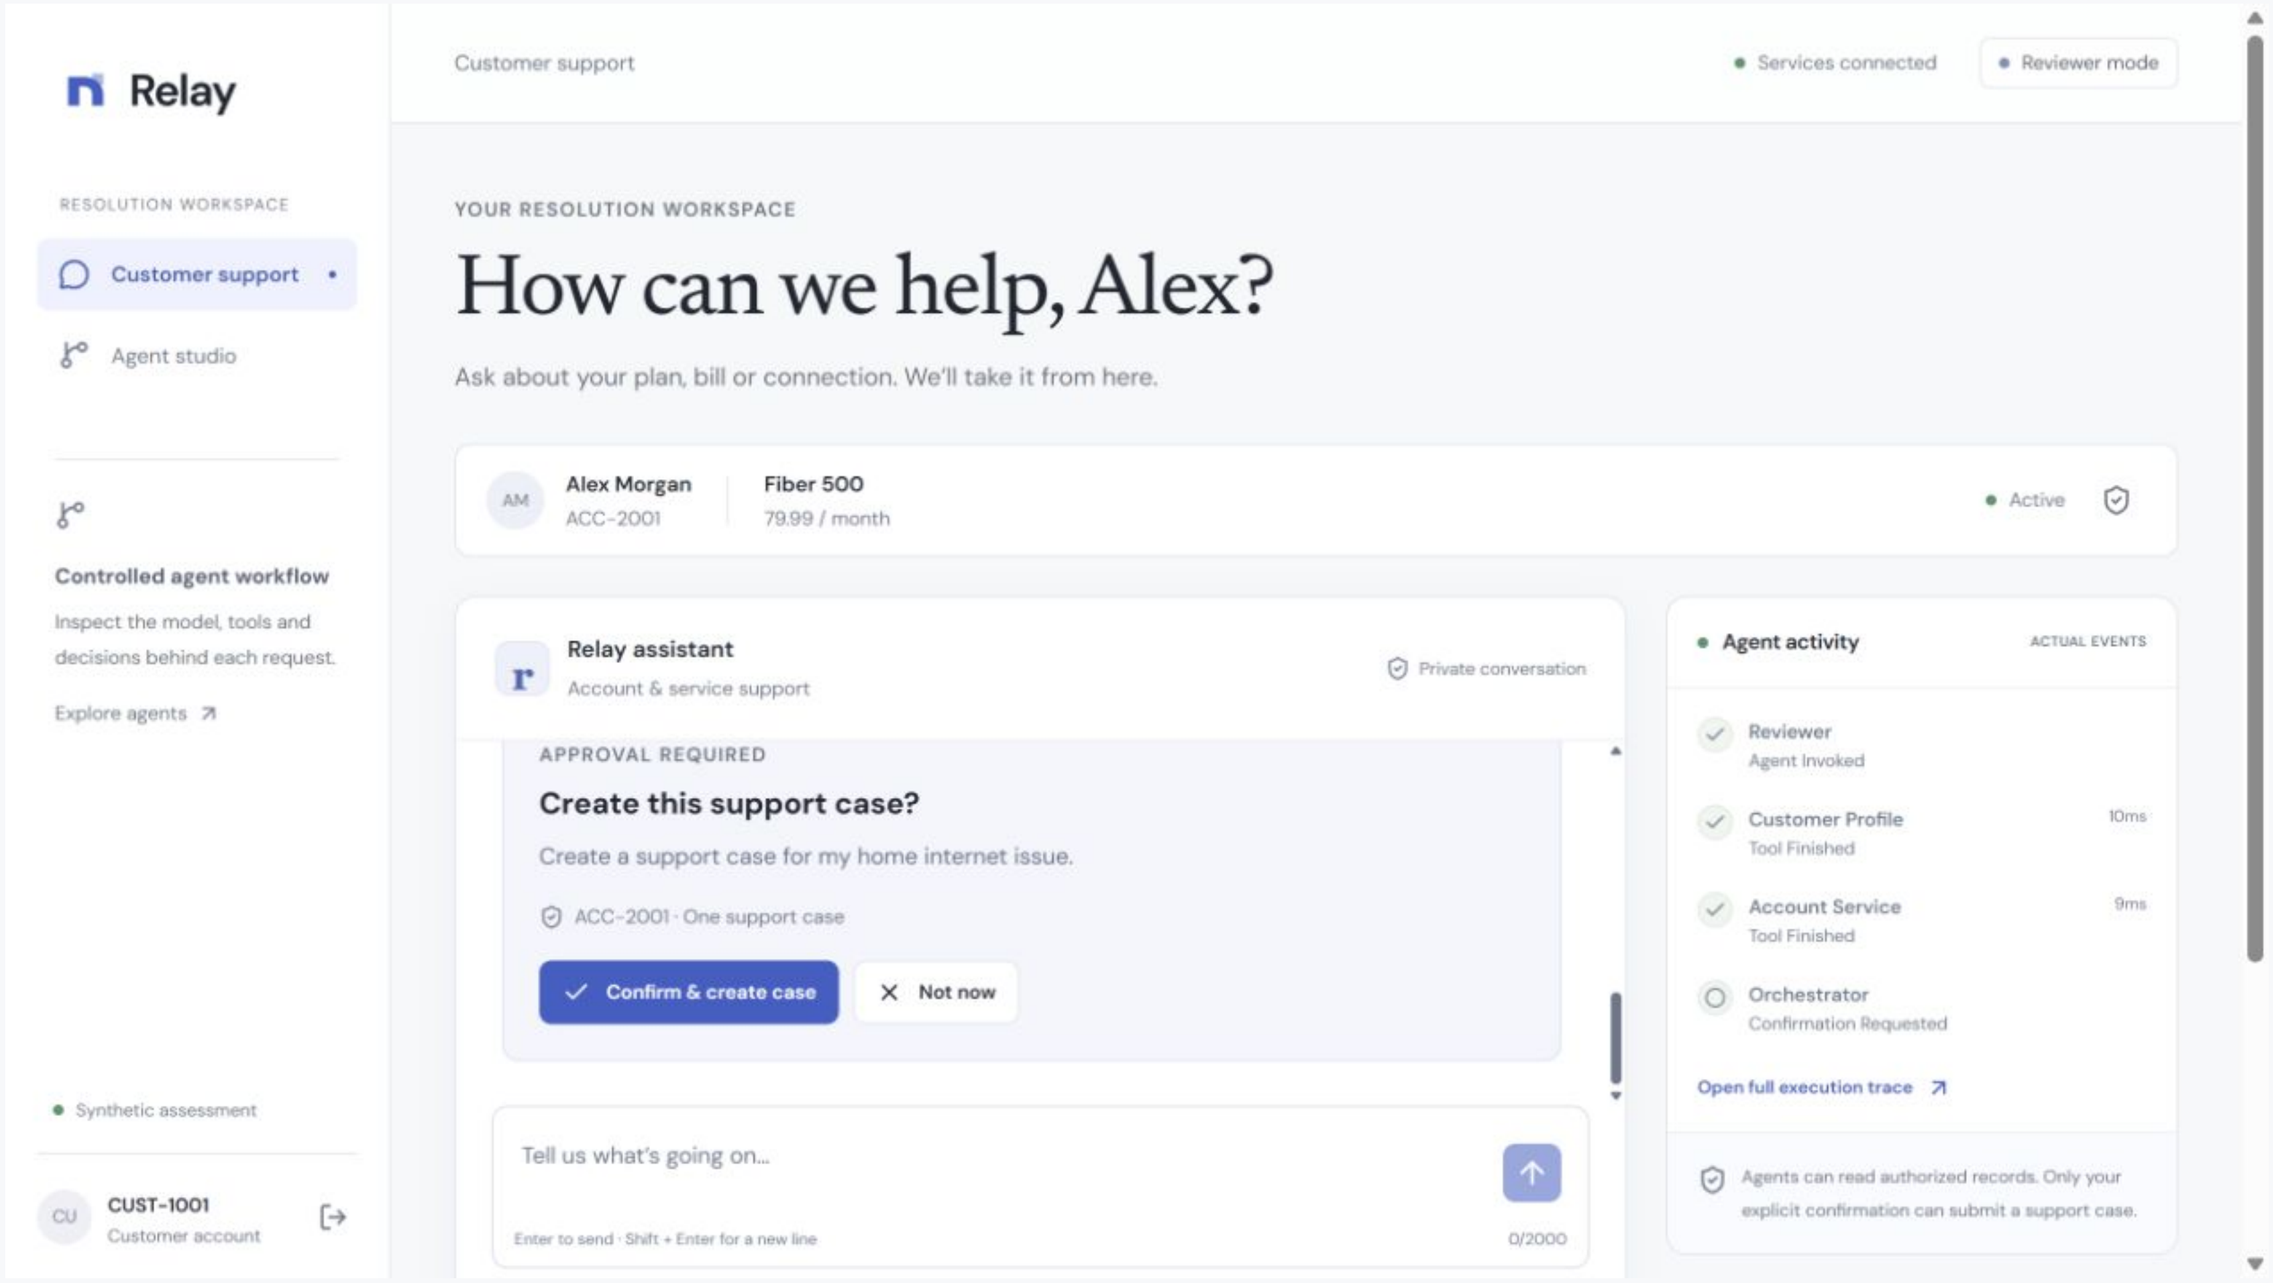

Introduce the account journey; reveal the form, then choose a supplied sample account.

Customer support

Move from the account context into the verified answer and actual activity panel.

Explicit approval

Pause on the account and case summary. Show approval before revealing the case receipt.

Agent Studio

Reviewer mode

RUNTIME & CAPABILITIES

The agents behind a request.

Google ADK

Bounded responsibilities. Authorized tools. A trace for every run.

Reviewer mode uses deterministic interpretation.

The catalog below describes the configured system. Execution history contains only recorded events. Model output never grants permission or submits a case.

Customer request → Router → Specialist & read tool → Verified answer / approval

01 ADK AGENT

Request router

Understand the request and identify missing context.

Validated structured routing

02 ADK AGENT

Account specialist

Read the authenticated customer's current plan.

`read_account`

03 ADK AGENT

Billing specialist

Reconcile the bill against verified line items.

`read_billing`

04 ADK AGENT

Service specialist

Combine network diagnostics with normalized legacy subscriber data.

`diagnose_service`

05 APPLICATION CONTROL

Action controller

Authorize, confirm, persist and verify a support-case action.

`create_case_after_confirmation`

Recorded invocations

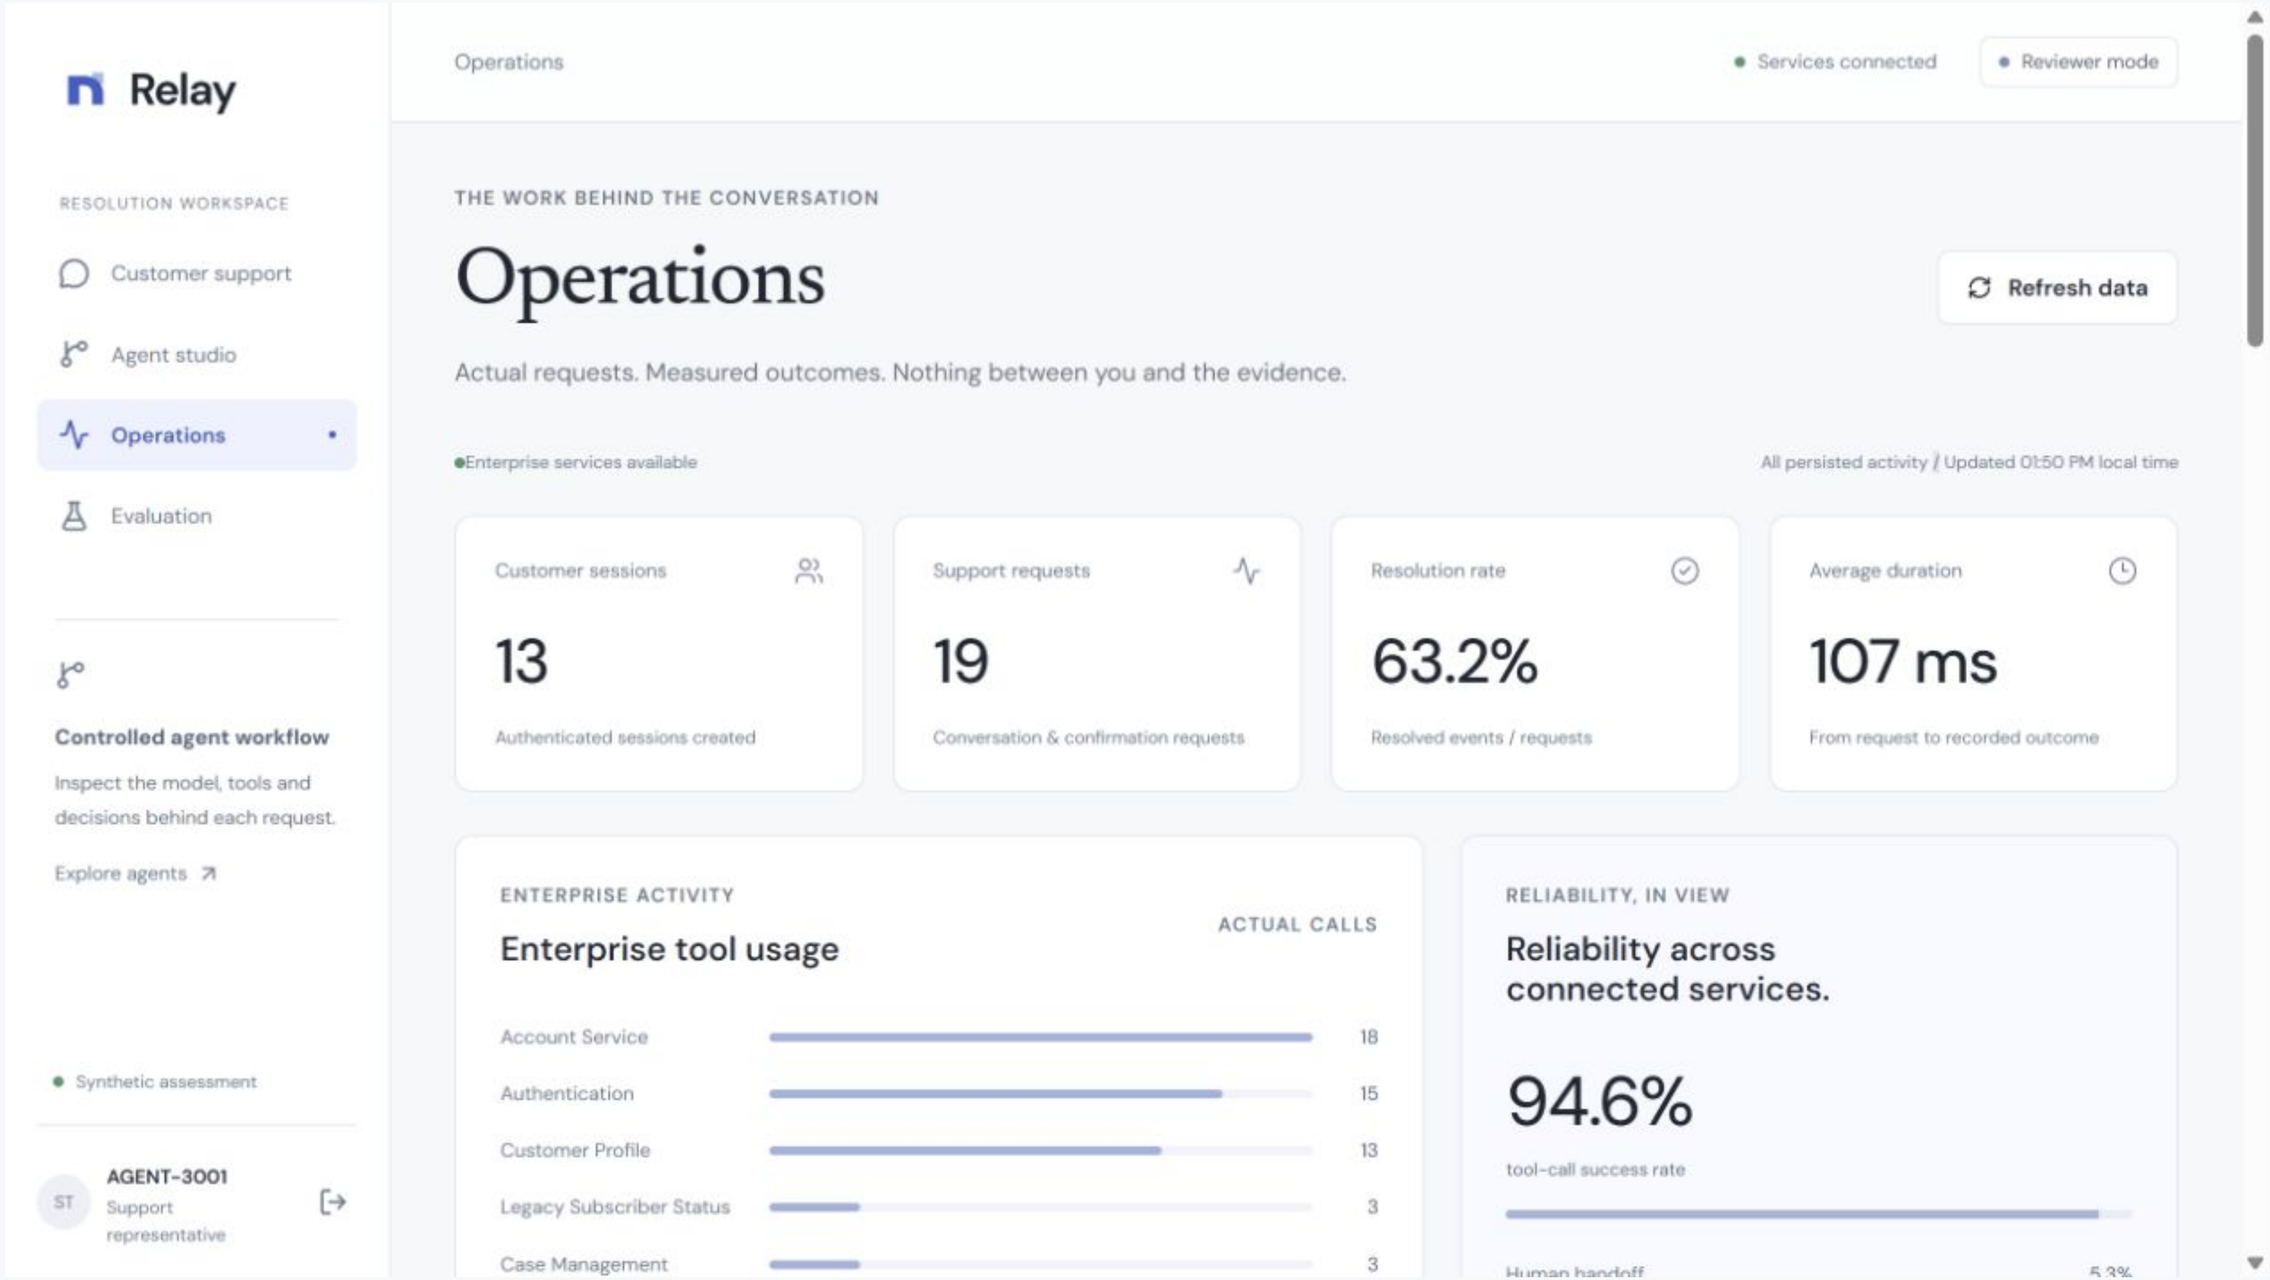

2 events in this view

{ } Reviewer — select · deterministic — 1:52:06 PM

{ } Reviewer — interpret · deterministic — 1:52:06 PM

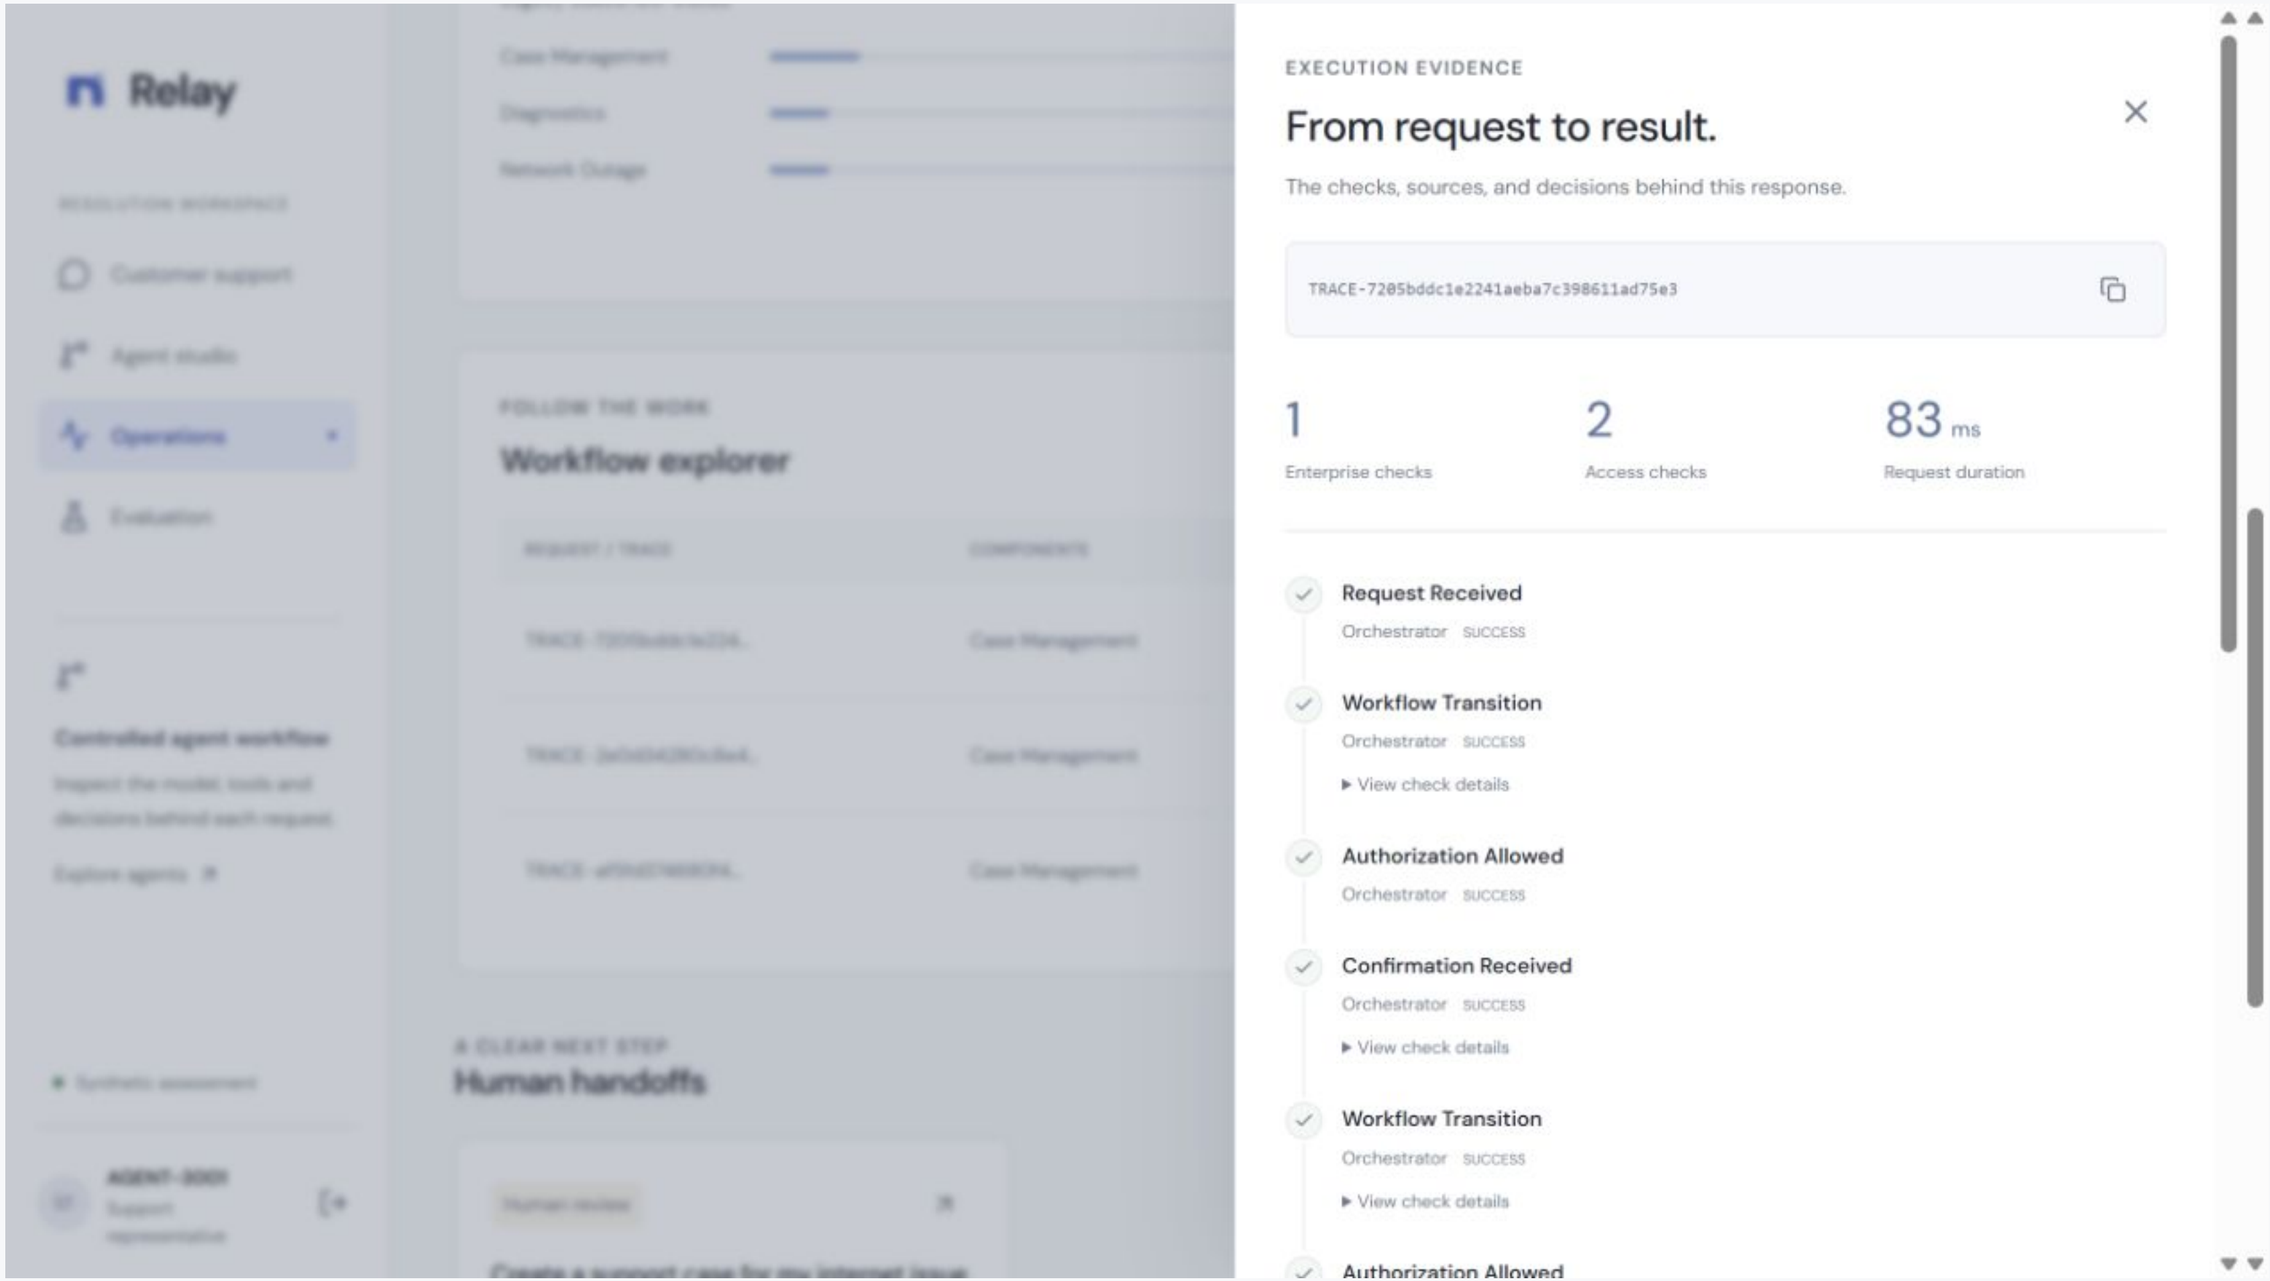

Follow router, specialist and authorized tool. Reviewer mode is explicitly labeled here.

Operations

Show measured requests, outcomes and integration usage; values come from persisted events.

Execution evidence

Open the side sheet and follow authorization, confirmation and the enterprise call.

REPEATABLE. REVIEWABLE. REAL.

Scenario evaluation

REVIEW LAB

Eight customer scenarios. The actual workflows, systems, and decisions behind them.

MANDATORY ACCEPTANCE SUITE

Eight required customer scenarios

Only the model interpretation is deterministic. Authentication, enterprise calls, legacy XML, confirmations, and telemetry execute through the real backend.

Run all eight scenarios

01 ✓ Verified
Grounded plan inquiry
Authenticate · Retrieve ACC-2001 · Return Fiber 500
SCN-001

02 ✓ Verified
Ambiguous service problem
Ask which service · Preserve context · Continue after clarification
SCN-002

03 ✓ Verified
Multi-system resolution
Grounded resolution or escalation
SCN-003

04 ✓ Verified
Protected support-case action
Authorize · Summarize · Confirm
SCN-004

05 ✓ Verified
Cross-customer access
Access denied
SCN-005

06 ✓ Verified
Legacy subscriber status
Call legacy API · Parse XML · Normalize
SCN-006

07 ✓ Verified
Case service unavailable
Detect failure · No false success · Safe retry
SCN-007

08 ✓ Verified
Gemini unavailable
Degraded mode · Preserve request · Continue deterministic controls
SCN-008

SCN-001 selected · uses supplied synthetic identity and fixtures

Run selected

Execution results

FROM ACTUAL BACKEND CHECKS

Gemini unavailable — SCN-008 · 19 / 19 checks passed — PASS +

Case service unavailable — SCN-007 · 25 / 25 checks passed — PASS +

Legacy subscriber status — SCN-006 · 17 / 17 checks passed — PASS +

Cross-customer access — SCN-005 · 14 / 14 checks passed — PASS +

Protected support-case action — SCN-004 · 30 / 30 checks passed — PASS +

Multi-system resolution — SCN-003 · 17 / 17 checks passed — PASS +

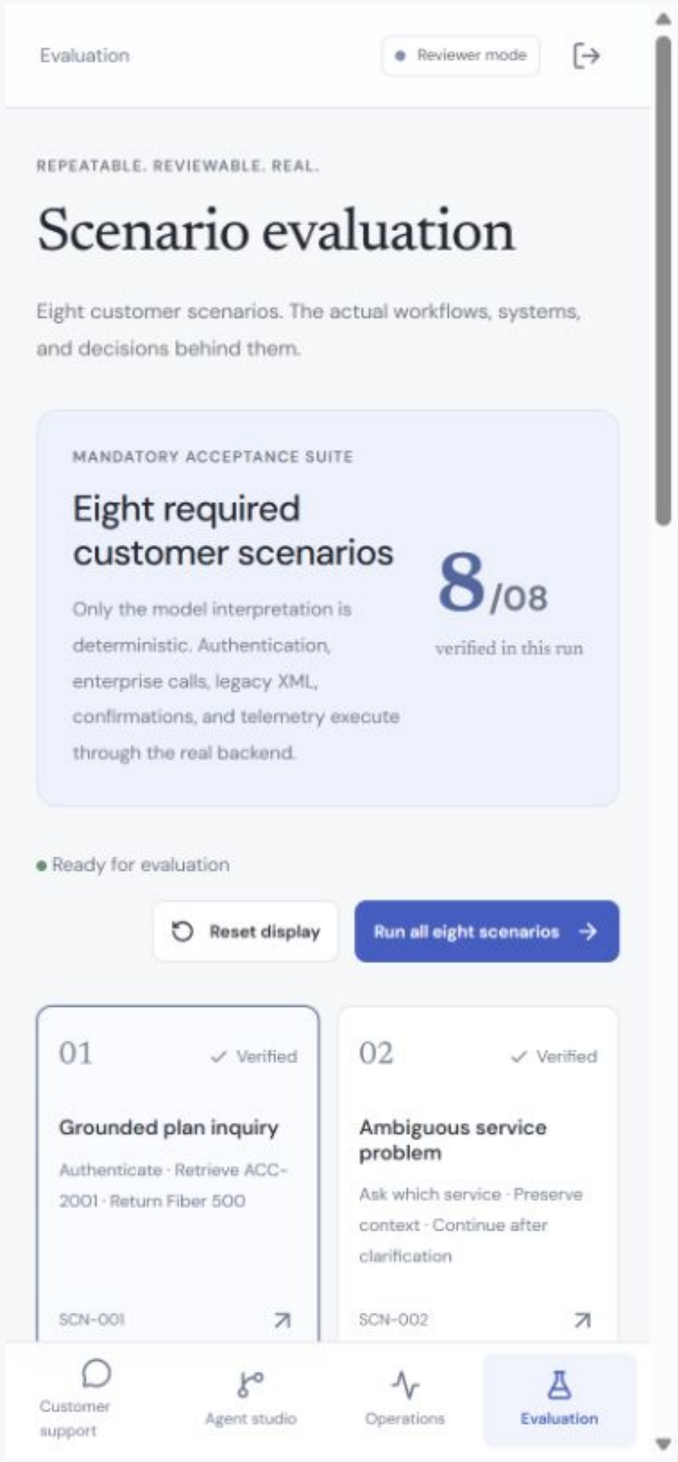

Ambiguous service problem — SCN-002 · 21 / 21 checks passed — PASS +

Grounded plan inquiry — SCN-001 · 17 / 17 checks passed — PASS +

SCN-007 causes a real mock-service 503. SCN-008 explicitly simulates provider unavailability. Reset clears this display, while backend evidence stays in the audit history.

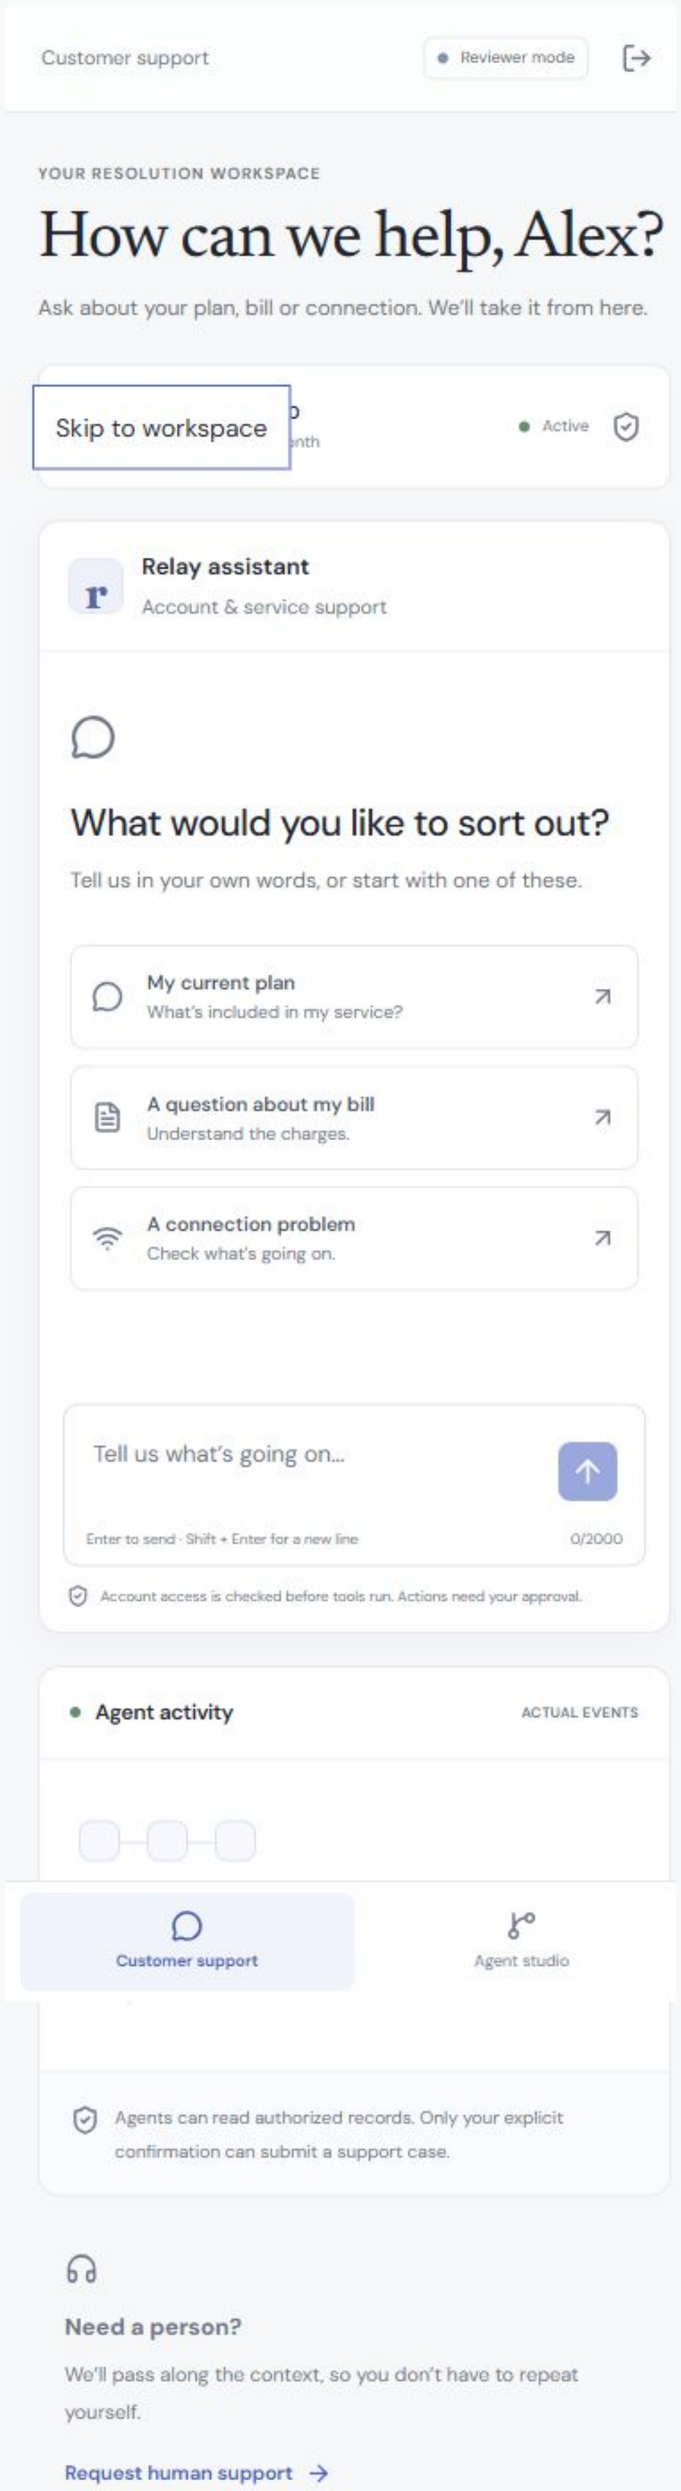

Run the suite and show all eight results. Each result expands into checks and traces.

Mobile evaluation

Show the responsive layout and persistent bottom navigation.

Mobile support

Show the same customer workflow at the mobile breakpoint.
